

Explore our newly expanded range of Grignard Reagents

The Grignard reaction is an essential method in the formation of carbon-carbon bonds.

In response to customer demand for more efficient Grignard Reagents and the desire to carry out chemistry in an environmentally friendly manner, we recently expanded our range of Grignard Reagent products by almost 50%. Supplied in solvents such as diethyl ether, tetrahydrofuran, 2-methyltetrahydrofuran and cyclopropylmethyl ether, our Grignard Reagent range offers the widest choice of reactivity, ease of work up and reduced environmental impact.

In reactions involving Grignard Reagents it is essential to exclude water and air, which rapidly destroy the reagent. Therefore, we provide these sensitive reagents in the industry-leading AcroSeal® packaging, preventing the degradation of the reagents.

We offer the following Grignard Reagents.
